

PRODUCT BROCHURE · SELF-HOSTED VIDEO MEETINGS

Your meetings. Your brand. Your servers.

A complete, **white-label video meeting platform** you deploy on your own infrastructure — with dual-AI summaries, recording & transcripts, engagement analytics and enterprise-grade authenticated email built in. **No per-seat lock-in. No data leaving your control.**

 100% White-Label

 Self-Hosted & Private

 Dual-AI Summaries

 Recording & Transcripts

 Own Cloud Storage

 Authenticated Email

 Engagement Analytics

BUILT FOR Agencies · Training institutes · Universities · Support teams · SaaS businesses

A meeting platform that **belongs to you**

InstaDataTalk is a full-featured video conferencing suite — like Google Meet, Zoom or Teams — but delivered as **your own product**. It runs on your servers, carries your branding, keeps every recording and transcript in **your** cloud storage, and bundles the premium tools others sell as costly add-ons. No per-seat lock-in. No data leaving your control.

HD video & audio

Crisp, low-latency multi-party meetings powered by a modern WebRTC engine — on desktop and mobile browsers, **nothing to install**.

Fully white-labeled

Your name, logo, colours and domain across the entire product and every email — **guests never see a third-party brand**.

Dual-AI summaries & minutes

Automatic summaries and Minutes-of-Meeting from a dual-AI engine that **fails over automatically** — so you always get a result.

Private by design

Self-hosted on infrastructure you control. Recordings, files and transcripts stay in **your own cloud storage**.

Live transcription

On-device, real-time captions for every meeting — powering the AI summary and a **searchable record** of what was said.

Engagement analytics

Optional attentiveness monitoring gives organizers a private read on participant engagement — **unique to InstaDataTalk**.

Everything premium — included, not upsold

Recording, AI minutes, transcription, virtual backgrounds, whiteboard, screen annotation, remote control, engagement analytics and authenticated email **all ship in the box**. On the mainstream platforms, most of these sit behind higher tiers or paid add-ons.

One platform, every meeting tool

A deep, integrated toolkit that covers collaboration, support, training and proctored sessions — all from a single browser tab.

Recording & one-click download

Record any meeting and download the MP4 the moment it ends, or share a link — stored in your own cloud storage.

Auto Minutes & summary

AI writes the summary and structured minutes, lists attendees, and emails everyone a secure report link — no manual notes.

Virtual backgrounds

On-device background blur and replacement — no green screen, and no privacy trade-off.

Whiteboard & live annotation

A shared collaborative whiteboard, plus draw-on-screen annotation over any presenter's screen in real time.

Screen share + remote control

Share a screen and, with consent, hand over real mouse & keyboard control — ideal for support and training.

In-meeting file sharing

Drag-and-drop files to the room or send directly to one participant, with previews and progress — kept in your storage.

Lobby & admission control

A waiting room with host approval, mute-on-entry and guest permissions keeps every session secure.

Calendar invites & reports

Scheduled meetings send branded invites with .ics attachments; after the call, recording & summary links reach every attendee by email — and WhatsApp.

Proctoring & attentiveness

Consent-based engagement monitoring with a live organizer panel and report — purpose-built for exams & training.

Attendance register

An automatic, downloadable attendance record for every meeting — join times and participants captured for you.

Collaboration, support, training & exams — one tab

Every tool above is native to the platform: no plug-ins for participants to install, no third-party services to stitch together, and nothing that takes your data outside your deployment.

It looks like your product — because it is

This is the difference that matters. Google Meet, Zoom and Teams are **their** brands on **their** clouds. InstaDataTalk becomes **your** branded meeting platform — one you can offer to your own clients, students or teams.

Your brand, end to end

Your logo, product name, colour palette and wordmark appear across the app, the meeting room, and every outgoing email and report. **Guests join your platform.**

Your own domain

Run it on your domain over HTTPS. Invitation links, recording links and report links all carry **your address** — never a vendor's.

Your data sovereignty

Recordings, shared files and transcripts live in object storage you own. **Nothing is mined, resold, or held on someone else's cloud.**

Your email identity

Invites, calendar events and post-meeting reports are sent from your own domain with full **SPF / DKIM / DMARC** authentication.

Your AI keys

Plug in your own AI provider keys from the admin panel. You control the model, the cost and the data — **with automatic fallback.**

No per-seat lock-in

Because it is self-hosted, you are **not metered per participant or per minute** the way the big platforms charge.

Offer meetings as your own service

Agencies, training institutes, universities, support teams and SaaS businesses can deploy InstaDataTalk as a **branded product for their audience** — without building a video platform from scratch.

Enterprise foundations, **built in**

Beyond the meeting itself, InstaDataTalk is engineered to keep working, protect your data and give you full operational control — the parts that matter when you run this as a **real service**.

Dual-AI engine, no downtime

A primary AI (Claude via OPUSMAX) with an automatic OpenAI fallback. Every meeting runs a **pre-flight AI health check** and warns the host if AI is unavailable — so summaries and minutes always come through.

Your storage, your rules

Recordings & files stream to your own S3-compatible cloud (e.g. Backblaze B2). Built-in **lifecycle automatically removes media** after a set retention window — controlling both cost and privacy.

Professional, authenticated email

Branded invites with calendar (.ics) and post-meeting report links, delivered with **SPF / DKIM / DMARC** and a transactional relay — reliably reaching Gmail, Outlook and Microsoft 365 inboxes.

Admin control center

A modern dashboard for users, meetings, storage usage and AI/email health. **Rotate provider keys, run diagnostics** and oversee the whole deployment from one screen.

Native screen tools

An optional desktop helper adds whole-screen annotation and consent-based remote control — ideal for **live support, demos and training** beyond the browser.

Privacy-safe reports

Attendees receive the meeting summary and minutes — while sensitive engagement / attentiveness analytics **stay private to the organizer, by design**.

Runs as a real, ownable product — not a trial

Automatic failover, your-cloud storage with lifecycle, authenticated deliverability and an admin cockpit mean InstaDataTalk **stands up to production use** across teams, campuses and client-facing deployments.

What you get here that you don't elsewhere

A side-by-side look at where InstaDataTalk goes beyond the mainstream platforms — on ownership, branding, reliability and bundled premium tools.

CAPABILITY	InstaDataTalk	Google Meet	Zoom	Teams
Full white-label rebrand (logo, name, colours)	✓ Yes	No	No	No
Self-hosted on your own servers	✓ Yes	No	No	No
Recordings stored in your own cloud	✓ Yes	No	No	No
Automatic media retention / data lifecycle	✓ Yes	No	Limited	Limited
Dual-AI summaries with automatic failover	✓ Yes	No	No	No
AI summary & minutes included	✓ Yes	Add-on	Add-on	Add-on
Live transcription / captions	✓ Yes	Yes	Yes	Yes
Attentiveness / proctoring analytics	✓ Yes	No	Limited	No
Draw-on-screen live annotation	✓ Yes	No	Partial	Partial
Remote control of shared screen	✓ Yes	No	Yes	Yes
Collaborative whiteboard	✓ Yes	Basic	Yes	Yes
Branded, authenticated invite & report email	✓ Yes	No	Partial	Partial
Use your own AI provider & key	✓ Yes	No	No	No
No per-seat / per-minute metering	✓ Yes	No	No	No
Own data & privacy (no vendor mining)	✓ Yes	No	No	No

Yes included · Add-on / Limited / Partial higher tier or partial · No not available. Competitor capabilities vary by plan and are shown for general comparison.

The bottom line
 You get the everyday meeting experience people already know — **plus ownership, branding, reliability, privacy and a premium toolkit** that the mainstream platforms either lock behind upgrades or don't offer at all.

Make every meeting unmistakably yours.

Bring your team, your clients and your students onto a meeting platform that carries your name, protects your data, and does more out of the box. Let's set up your branded deployment.

1

Talk to us

Share your use case — client meetings, classes, support, training or exams — and the branding you want.

2

Branded deployment

We stand the platform up on your servers and domain, wired to your storage, email and AI keys.

3

Go live as you

Invite your audience to a meeting platform that carries your name — and only your name.
